

Electrical Distribution

McKay's Northland distribution team provides dependable support for network and contractor crews, assisting with a wide range of tasks from fault response and maintenance to new connections and minor upgrade works.

With the capability to respond quickly, we help meet demand across both planned and reactive jobs, ensuring all work is carried out safely, efficiently, and in line with industry standards.

Decommissioning Infrastructure

McKay provides safe and professional decommissioning of outdated or hazardous infrastructure. All work is performed with a strong focus on health, safety, and compliance.

Service Line Checks & Maintenance

McKay conducts service line safety checks to identify potential risks early and maintain a safe and secure power supply. This approach supports proactive asset management by shifting from reactive responses to preventative maintenance.

Overhead to Underground Conversions

We offer a safe and reliable option to remove existing overhead lines and convert them to an underground installation.

Overhead Line Works

- Private service line construction (new or replacement)
- Streetlight installations, maintenance and faults (lamp and luminaire changes)
- LV crossarm and insulator replacements
- Overhead conductor repairs or section Replacements
- Overhead live line works
- Preplanned vegetation clearance coordination

Underground Service Works

- Cable jointing (HV & LV)
- Larger subdivision works (trenching & cable installations)
- Cable fault locate and repair
- Reticulation support for new developments (Design & estimation)
- Pillar maintenance and replacement
